**It's Been a Rough Winter for Infections, VTT can Help Prevent Bacterial Transfer!**

***Silver Enviro Wipe Hand Sanitizers Help in Stopping Bacterial Transfer***

NEWARK, NEW YORK, March 2—**Bacteria are EVERYWHERE!** One of the most common ways that bacteria are transferred is by hand contact (hand to hand or object to hand). Did you know that:

- Bacteria is found on many surfaces including: grocery carts, money, telephones, remote controls, and even menus at Restaurants?
- 94% of paper currency of money tested by Scientific American in a 2017 test of currency in circulation was contaminated with bacteria including Staphylococcus aureus, Escherichia coli, Streptococcus mutans and salmonella?

Almost everyone at some time during each week touches another person's hand in greeting, a shopping cart handle, doorknobs, money during transactions.....the list goes on and on. V Technical Textiles manufactures and markets Enviro Wipes that are made of textiles containing 99% pure silver, which has widely known anti-microbial properties. Enviro Wipes can be used to wipe the hands after contact with a potential carrier of bacteria. They can also be used to "wipe down" a contaminated surface or as a "anti-microbial barrier" between hand and object when touching doorknobs, ATM displays, etc. They're reusable and easily carried in a pocket or purse...[learn more!](#)

**Care instructions:** Enviro Wipes can be machine washed delicate cycle cold, using a gentle soap like baby shampoo or TexCare® and line dried with no loss of effectiveness. Use NO CHLORINE BLEACH, as it will react with the silver making it less effective!
